Overview

- Test the Specialty Genes Search using representative search criteria.
- Test using example Keyword, Pathogen Group, and Taxon Name.
- Test using Keyword and Pathogen Group only.
- Inspect search results to verify that they match search criteria.

Test Results

- Test results were verified by examination of returned data via inspection and filters.
- All searches returned expected data, with results matching search criteria.

Advanced Search

Specialty Gene Search

Search for specialty genes annotated in microbial genomes, such as antimicrobial resistance genes, virulence factors, essential genes, drug targets, and human homologs. Search using generic keywords, pathogen group, property, source database, or protein product. For further explanation, please see the [Advanced Gene Search Quick Reference Guide](#).
